# Bartłomiej Treśka

+48 730 436 609 | bartlomiej.treska@gmail.com | Kraków, Poland | LinkedIn | GitHub

## Education

**AGH University of Science and Technology** — Kraków, Poland
*B.S. in Computer Science (Specialization: Software Engineering)* — *2022 – 2026*

## Experience

**Qualtrics** — Kraków, Poland
*XM Software Engineer* — *Jul. 2025 – Present*

- Develop data integration components to migrate data from legacy platforms.
- Maintain legacy Java Spring Boot services.
- Migrate Jenkins infrastructure to GitLab CI and Spinnaker.
- Implement RESTful APIs across distributed microservices to improve inter-service communication efficiency and reduce overall request latency.
- Migrate Jenkins infrastructure to GitLab CI and Spinnaker.

**Pegasystems Software Limited** — Kraków, Poland
*Back-end Software Engineer Summer Intern* — *Jul. 2024 – Sep. 2024*

- Maintained Kotlin Spring Boot backend service.
- Expanded system observability and monitoring by creating Grafana dashboards.
- Conducted unit and integration testing to elevate codebase quality and prevent regressions.
- Took part in feature product life-cycle including discussions with stakeholders.

## Projects

**Golancer – L7 HTTP Load Balancer** | *Go, Docker, Kubernetes (Helm)* — GitHub

- Built a lightweight HTTP load balancer in Go that reverse-proxies requests across a pool of backend instances using round-robin selection (atomic counter), returning 503 when no backends are available.
- Designed a concurrency-safe backend registry with a lock-free, copy-on-write read path, enabling backends to be added and removed at runtime via a JSON management API without restarts.
- Exposed liveness and readiness probes (`/healthz`, `/readyz`) and packaged the service with Docker and a Helm chart for Kubernetes deployment.
- Created a local dev harness simulating multiple backends and traffic generators for end-to-end testing.

**Device Working Time Tracker** | *Python*

- Developed a lightweight Python background application to track, aggregate, and visualize daily device uptime.
- Launches automatically on device boot and shows pop-up alerts when a user-configured threshold is exceeded.

## Technical Skills

**Backend**: Java, Kotlin, Golang, Python
**Frontend**: JavaScript, TypeScript
**Datastores**: MySQL, MongoDB, Elasticsearch, Redis
**Tools & Infrastructure**: Git, Kubernetes, Helm, Kafka, Docker, Spinnaker, GitLab CI
**Libraries & Frameworks**: Spring Boot, React, Protobuf
